

Rotary Shaft Seals Catalogue

Product Catalogue

Rotary Shaft Seals

RSS.981015 - C

The information contained in this catalogue is based on many years of experience in the fluid power industry, specifically in the manufacturing and application of fluid sealing and bearing systems. This information is a product of extensive in-house testing & vast international experience across all types of industries since 1959. However, unknown parameters and conditions may restrict general statements during usage.

We would be obliged to offer our recommendations and sealing solutions for your particular application. However, no warranty or guarantee is expressed since the conditions of use are beyond our control.

The proportions of all the seal ranges have been determined to give a satisfactory performance when used with the recommended operating conditions.

The material from which each seal type is made could be found in the description under each seal type.

Spareage is continuously improving its ranges and reserves the right to withdraw or modify any item shown in this catalogue without notice.

Dear Customer,

Spareage Seals Ltd. had its inception in 1959. Since the beginning, it has been specializing in the area of high pressure hydraulic and pneumatic seals, rotary seals, chevron packings, O-rings, bearing elements, etc. Today after investing nearly four decades into this specialized area of business with high emphasis on quality, innovation and customer support, Spareage Seals Ltd. can rightly claim leadership in its chosen line of business.

Our aspiration for constant growth and continuous improvement has led us to be equipped with the latest machinery for manufacturing. The manufacturing process is ably supported by state of the art testing laboratory and an advanced quality assurance system. The **ISO 9001 Certificate** for our company provides a testimony for the same.

Spareage always provides total quality products and service with emphasis on product quality and delivery period at a competitive price.

Spareage take pride in research and development activities. Pursuing new material and material combinations coupled with newer/improved processes and profiles, keeping in mind the end application for the seal is a continuous process here at Spareage. The technical collaboration with one of the leading Seal manufacturers of Europe, **UK Seals & Polymers Ltd.**, has provided a new impetus to the same.

Our dedicated services have ensured a high level of customer satisfaction for more than 900 clients. Some of our esteemed clients are in the Indian Defence Organization, Indian Railways, Steel Plants and Hydraulic Cylinder manufacturers, Automobile Industries, etc. A well established sales and service network covering 10 major Indian cities makes it possible for us to respond at a short notice.

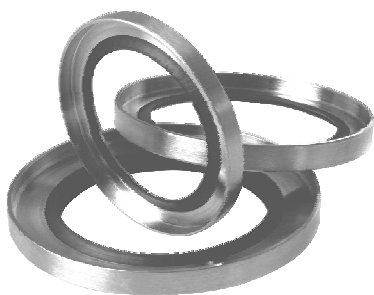

It would be difficult to attempt a truly comprehensive coverage of all the seals manufactured by Spareage in a catalogue of limited pages. Our aim, therefore has been to provide a standard format to our customers to facilitate their seal selection process. We are presenting as many different profiles and sizes as feasible in this catalogue, though there are many more in our production range. We therefore encourage you to contact us with any specific requirement of yours even though it may not be covered in this catalogue. With more than 1,00,000 moulds in our stock, we are confident of meeting your requirements.

We look forward to render our products and services to you.

Yours truly,

U. S. Sabharwal,
Managing Director
(Spareage Seals Ltd.)

STANDARD ROTARY SHAFT SEALS

AIA

Pressure : 0.5 Bar
Temperature : -30° to +100°
Speed : 10 m/s
Material : NBR / MS

Old Style - OSA

The **AIA** type rotary shaft seal has a metal insert encased in rubber on all but the face away from the fluid to be sealed. It is especially useful where housing may have a greater coefficient of expansion than the metal case oil seal. It is more suitable for general sealing applications and housings having considerable amount of corrosion.

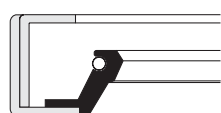

ACA

Pressure : 0.5 Bar
Temperature : -30° to +100°
Speed : 10 m/s
Material : NBR / MS

Old Style - OSB

The **ACA** type rotary shaft seal is also widely used seal and many sizes are available ex-stock. The metal encased on the outer diameter and on the non fluid sealing side ensures a better resistance to thermal expansion when compared to the rubber encased metal insert rotary shaft seal.

ACB

Pressure : 0.5 Bar
Temperature : -30° to +100°
Speed : 10 m/s
Material : NBR / MS

Old Style - OSC

The **ACB** type rotary shaft seal is a closed, spring loaded built up seal with two metal cup inserts. The complete metal encased ensures strength especially for seals with small cross section or even large diameters. Spareage can supply these seals upto 1500 mm. Please refer to the dimension list for availability.

AIB

Pressure : 0.5 Bar
Temperature : -30° to +100°
Speed : 10 m/s
Material : NBR / MS

Old Style - OSA-DL

AIB is similar to AIA type rotary shaft seal but with an additional dust lip which is provided to avoid entry of light to medium dust and dirt.

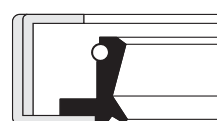

ACC

Pressure : 0.5 Bar
Temperature : -30° to +100°
Speed : 10 m/s
Material : NBR / MS

Old Style - OSB-DL

ACC is similar to ACA type rotary shaft seal but with an additional dust lip which is provided to avoid entry of light to medium dust and dirt.

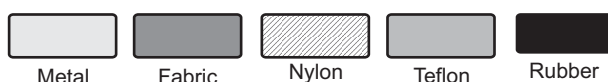

ACD

Pressure : 0.5 Bar
Temperature : -30° to +100°
Speed : 10 m/s
Material : NBR / MS

Old Style - OSC-DL

ACD is similar to ACB type rotary shaft seal but with an additional dust lip which is provided to avoid entry of light to medium dust and dirt.

Material Identification by below colour chart -

Metal

Fabric

Nylon

Teflon

Rubber

Pl. refer pg. no. 15 to 91 for sizes list of above profiles.
Above profiles can be supply in other materials listed on pg 124 on request, as per application.

STANDARD ROTARY SHAFT SEALS

AID

Pressure : 0.5 Bar
Temperature : -30° to +100°
Speed : 10 m/s
Material : NBR / MS
Old Style - OSA-WS

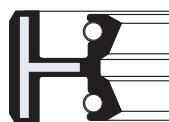

The **AID** rotary shaft seal is useful where pressure is in excess of 0.5 bar or for seal with small diameter where spring cannot be loaded.

ACG

Pressure : 0.5 Bar
Temperature : -30° to +100°
Speed : 10 m/s
Material : NBR / MS
Old Style - OSB-WS

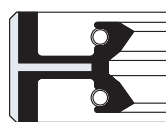

The **ACG** rotary shaft seal is similar to the AID but has an advantage of better housing retention due to Metal Cover.

AIC

Pressure : 0.5 Bar
Temperature : -30° to +100°
Speed : 10 m/s
Material : NBR / MS
Old Style - OSA-DL/DS

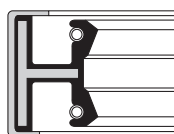

The **AIC** rotary shaft seal can be used for sealing two separate fluids. e.g. coolant from shaft side to enter the bearing or to avoid the leakage of bearing lubricant from the opposite side.

ACE

Pressure : 0.5 Bar
Temperature : -30° to +100°
Speed : 10 m/s
Material : NBR / MS
Old Style - OSB-DL/DS

The **ACE** is similar to AIC but has a higher retention in the bearing housings due to Metal Cover.

ACF

Pressure : 0.5 Bar
Temperature : -30° to +100°
Speed : 10 m/s
Material : NBR / MS
Old Style - OSC-DL/DS

The **ACF** is also similar to ACE but is most suitable for large diameters because of its 2 Metal Cups.

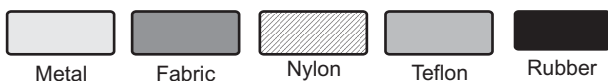

AIE

Pressure : 0.5 Bar
Temperature : -30° to +100°
Speed : 10 m/s
Material : NBR / MS
Old Style - OSA-WS/DL

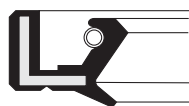

AIE is a metal inserted, rubber covered rotary shaft seal with an additional dust lip to avoid entry of dust.

Material Identification by below colour chart -

Pl. refer pg. no. 15 to 91 for sizes list of above profiles.
Above profiles can be supply in other materials listed on pg 124 on request, as per application.

STANDARD ROTARY SHAFT SEALS

AIJ

Pressure : 0.5 Bar
Temperature : -30° to +100°
Speed : 10 m/s
Material : NBR / MS
Old Style - OSA-WL

The **AIJ** is metal inserted , rubber covered ,spring loaded rotary shaft seal with wiping lip projected outside the groove which gives good wiping against high ingress of dust.

AIK

Pressure : 0.5 Bar
Temperature : -30° to +100°
Speed : 10 m/s
Material : NBR / MS
Old Style - M/R 4B/1

The **AIK** is metal inserted , rubber covered spring loaded seal with additional serration on outer diameter to assure sealing in the housing bore .

AIL

Pressure : 0.5 Bar
Temperature : -30° to +100°
Speed : 10 m/s
Material : NBR / MS
Old Style - OSA-1

AIL is metal inserted,rubber covered and encapsulated spring within a lip which prevents spring from falling out during installation.

ACH

Pressure : 0.5 Bar
Temperature : -30° to +100°
Speed : 10 m/s
Material : NBR / MS
Old Style - OSB-WS/DL

ACH is metal encased but with additional dust lip which is provided to avoid entry of light to medium dust and dirt .

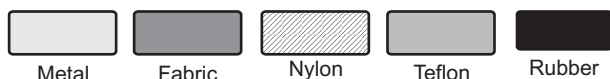

ACN

Pressure : 0.5 Bar
Temperature : -30° to +100°
Speed : 10 m/s
Material : NBR / MS
Old Style - OSB-1

ACN is metal encased with encapsulated spring within a lip which prevents spring from falling out during installation.

Material Identification by below colour chart -

Metal

Fabric

Nylon

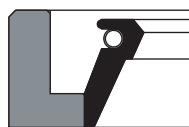

Teflon

Rubber

Pl. refer pg. no. 15 to 91 for sizes list of above profiles.
Above profiles can be supply in other materials listed on pg 124 on request, as per application.

FABRIC SEALS

The Standard Fabric reinforced seal is widely used in heavy machinery and engineering industries such as Rolling Mills, Gear Boxes etc. The material generally used is NBR (Nitrile) for the sealing lip which is bonded on the outer body made out of a hard and rigid fabric reinforced with NBR. This seal also proves most cost effective when compared to other types of seals.

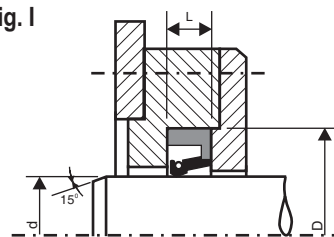

AFA

Old Style - OSRC-1

The **AFA** shaft seals are use wherever the adequate lubrication is provided by the hydraulic fluid. It can be installed back to back with a metal spacer (lantern ring) to provide lubricant between the seals. (Refer Fig. I)

Fig. I

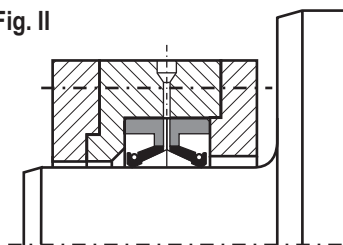

AFB

Old Style - OSRC-2

The **AFB** seal is similar to the AFA type seal with additional slots provided on the back face on periphery of the seal to enable the lubricant to enter through these slots for lubricating the sealing lips, thus preventing dry running or damaged to the sealing lips. (Refer Fig. II)

Fig. II

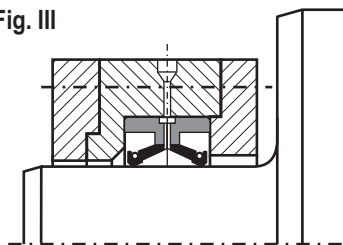

AFC

Old Style - OSRC-3

The **AFC** seal is similar to AFB but with additional distribution groove on seal body thus eliminates machining groove in housing. These seal is recommended to use back to back as shown in (Fig. III.)

Fig. III

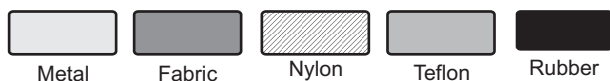

Application Details :

Pressure ≤ (bar)	Temperature (°C)	Speed ≤ (m/s)	Material
0.5	-30° to +100°	10	NBR / Fabric
0.5	-30° to +140°	20	HNBR / Fabric
0.5	-40° to +220°	25	FKM / Fabric

Note : These seals can be manufactured and supply in with single split (Straight Cut) for easy installation, avoiding costly and heavy dismantalling.

Please consult with Spareage before selecting the split version to suggest appropriate design according to application.

Above profiles can be supply in other materials listed on pg 124 on request, as per application.

FABRIC SEALS

	Pressure : 200 Bar Temperature : -30 ⁰ to +100 ⁰ Speed : 0.1 m/s Material : NBR / Fabric
AFM	Old Style - OSM-17

	Pressure : 400 Bar Temperature : -30 ⁰ to +100 ⁰ Speed : 0.2 m/s Material : NBR/Fab/POM
AFN	Old Style - OSM-19

	Pressure : 0.5 Bar Temperature : -30 ⁰ to +100 ⁰ Speed : 15 m/s Material : NBR / Fabric
AFO	Old Style - OSG-5

	Pressure : 0.5 Bar Temperature : -30 ⁰ to +100 ⁰ Speed : 5 m/s Material : NBR / Fabric
AFP	Old Style - IDS

	Pressure : 0.5 Bar Temperature : -30 ⁰ to +100 ⁰ Speed : 15 m/s Material : NBR/Fab/ST
AFQ	Old Style - OSSR-R/C

	Pressure : 0.5 Bar Temperature : -30 ⁰ to +100 ⁰ Speed : 10 m/s Material : NBR / Fabric
AFR	Old Style - OSRC-1E

	Pressure : 0.5 Bar Temperature : -30 ⁰ to +100 ⁰ Speed : 10 m/s Material : NBR / Fabric
AFS	Old Style - OSRC-DL

	Pressure : 0.5 Bar Temperature : -30 ⁰ to +100 ⁰ Speed : 10 m/s Material : NBR / Fabric
AFT	Old Style - OSRC-DL/DS

Material Identification by below colour chart -

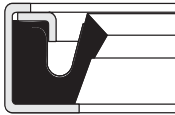

Metal	Fabric	Nylon	Teflon	Rubber

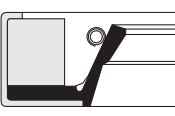

Pl. refer pg. no. 15 to 91 for sizes list of above profiles.
Above profiles can be supply in other materials listed on pg 124 on request, as per application.

HEAVY DUTY SEALS

 <p>ACI</p>	<p>Pressure : 0.5 Bar Temperature : -30° to +100° Speed : 10 m/s Material : NBR / MS</p> <p>Old Style - OSM-1</p>	<p>Pressure : 0.5 Bar Temperature : -30° to +140° Speed : 10 m/s Material : HNBR / MS</p>	<p>Pressure : 0.5 Bar Temperature : -40° to +220° Speed : 10 m/s Material : FKM / MS</p>
<p>ACI style rotary seal are mostly used in hot rolled or cold rolled steel rolling mills for sealing expensive bearing in the work rolls, intermediate rolls and backup roll chocks. Extremely longlife is assured compared to other seals. Due to a robust design providing a steel spacer and a hard CRC outer cup, this seal provides excellent retention in the housing thus increasing seal resistance to rotate or distort with the shaft as seen with conventional seals.</p>			

 <p>ACJ</p>	<p>Pressure : 0.5 Bar Temperature : -30° to +100° Speed : 10 m/s Material : NBR / MS</p> <p>Old Style - OSM-2</p>
<p>ACJ style rotary seal is similar to ACI but supply with a rubber spacer.</p>	

 <p>ACK</p>	<p>Pressure : 0.5 Bar Temperature : -30° to +100° Speed : 15 m/s Material : NBR / MS</p> <p>Old Style - OSG-1</p>
<p>Spareage ACK style Rotary Seal commonly use in heavy duty gear boxes. Due to its two metal case this seal becomes robust and with additional cup type spring create good contact with rotating shaft thus gives long term sealing ability in severe operating conditions.</p>	

 <p>ACL</p>	<p>Pressure : 0.5 Bar Temperature : -30° to +100° Speed : 20 m/s Material : NBR / MS</p> <p>Old Style - OSG-6</p>	<p>Pressure : 0.5 Bar Temperature : -30° to +140° Speed : 30 m/s Material : HNBR / MS</p>	<p>Pressure : 0.5 Bar Temperature : -40° to +220° Speed : 35 m/s Material : FKM / MS</p>
<p>Spareage ACL style Rotary Seal is use for high speed applications. This profile has a robust steel spacer enclosed into hard CRC (metal) cup with a rubber lip and a cup type spring preloaded with a garter spring to give double tension on the shaft. Can be used in the application where the shaft has an eccentric movement.</p>

Spareage Split Seals

- Split Seals are used to reduce downtime in replacing seals, especially during shut down time, without removing heavy couplings or parts.
- Should be used in applications such as bearings mounted on shafts, gear box couplings, fly wheels or heavy equipment in various industries.
- Spareage can provide specially moulded split seals which should be used with a retainer plate.

Installation Procedure:

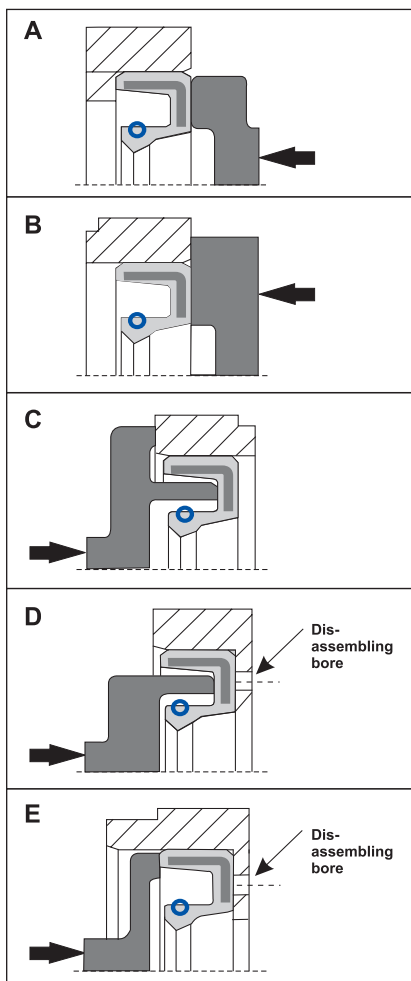

- 1) Install split end first in the housing.
- 2) Press rest of the fabric body of the seal in the housing.
- 3) Ensure the fit is right. Fix retainer plate.

Note : Retainer Plate is mandatory in split seal installation.

ROTARY SEAL INSTALLATION

Various force fit situations of the rotary shaft seal with suitable installation tools or devices.

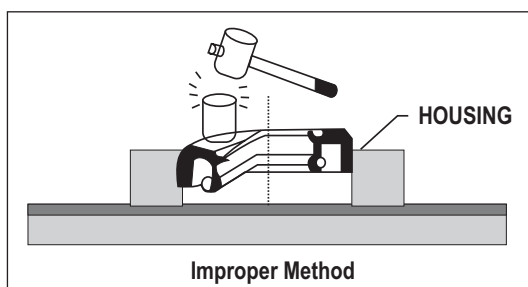

Installation Instructions

The following points must be observed when installing rotary shaft lip seals.

- Before installing clean the installation grooves. Shaft and seal must be greased or oiled for rubber seals.
- Sharp-edged transitions must either be chamfered or rounded or else covered.
- When pressing in the seal take care that the seal ring is not twisted.
- The pressing force must be applied as close as possible to the outer circumstance of the seal.
- After installation the seal must be concentric and at right angles to the shaft.
- The end face of the mounting bore is generally used as the contact surface the seal can also be fixed with a shoulder or a spacer washer.

STANDARD V - RINGS

DETAILS :

The standard V-Ring is an axial face seal manufactured from pure elastomer without any metal and fabric reinforcement. The V-Ring is used as a single seal against dirt, dust, water, grease, oil etc. It is also used as a secondary seal to protect main rotary sealing element which protects the bearings of heavy duty machines.

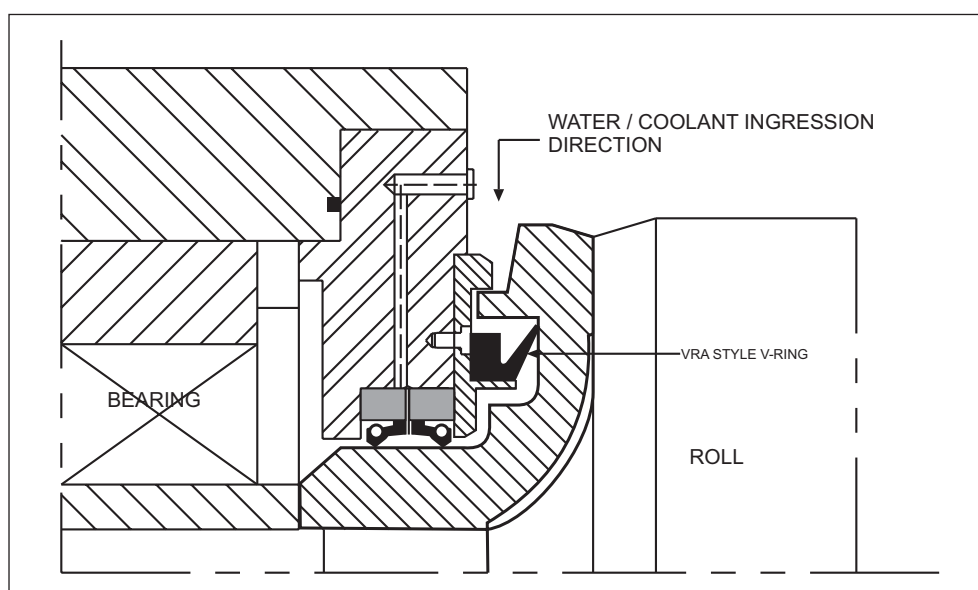

FUNCTION :

The sealing lip slides on a mating surface at right angle to the shaft. These rings rotate with the shaft and seals axially against a stationary counterface. The counterface can be endface of the bearing, a washer, stamping, bearing housing, or even the metal case of an oil seal. The flexible lip provides adequate sealing even in applications with considerable end play and shaft misalignment.

INSTALLATION :

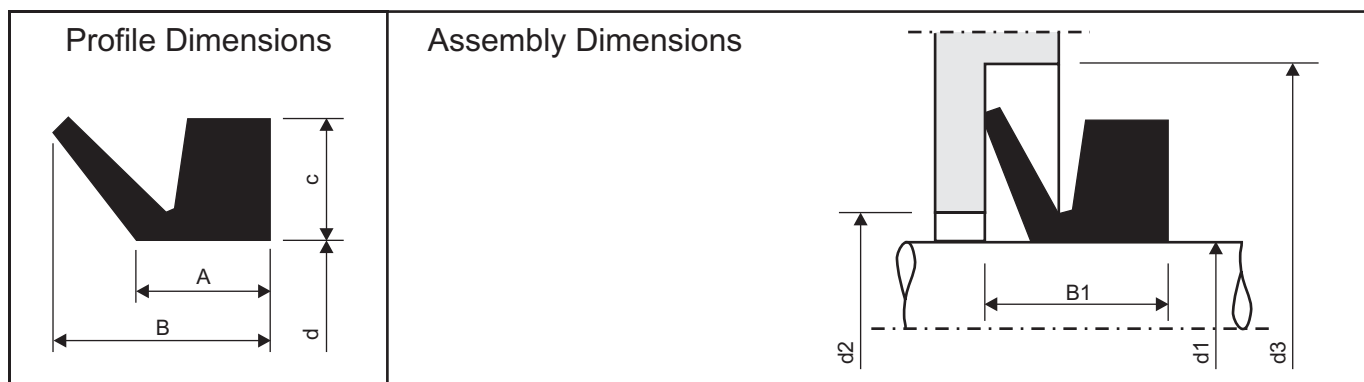

V-Rings can be stretched and installed directly over flanges, shaft and bearing housing without dismantling.

Below shown figure is one of the example for V - Ring Installation.

STANDARD V - RINGS - DIMENSIONS

TYPE : V-Ring VRA

If the size d1 is within the limit range between two V-Ring sizes, the larger V-Ring should be selected. Dimensions in mm.

V-Ring VRE larger than V-2000 can be manufactured against special order.
Profile & axle fitted width is same as for standard V-Ring VRE.

NOTE : The Standard materials for the above range is **NBR** for temperature -30°C to +100°C

STANDARD V - RINGS - DIMENSIONS

TYPE : V-Ring VAX

Profile Dimensions	Assembly Dimensions
	
c - 17.8	d2 Max. = d1 + 12.0
A - 17.3	d2 Min. = d1 + 50.0
B - 31.0	B1 = 25.0 ± 5.0

If the size d1 is within the limit range between two V-Ring sizes, the larger V-Ring should be selected. Dimensions in mm.

INDIAN STANDARD IS : 5129 (Part 1) - 1987

**SPECIFICATION FOR
ROTARY SHAFT RADIAL LIP TYPE OILSEAL UNITS
PART 1 - DIMENSIONS
(Second Revision)**

1. **Scope** - This standard covers the dimensions and other requirements of rotary shaft radial lip type oil seal units used to prevent leakage of oil, grease or penetrating of dust or both and other harmful particles along the surface of rotating shaft in general engineering applications.
Note - The rotary shaft radial lip type oil seal hereinafter will be referred as 'Oil Seal' throughout this standard.
2. **Terminology** - For the purpose of this standard, the terminology given in Part 2 of this standard shall apply.
3. **Types** - Oilseal shall be of following types (See Fig. 1) :
 - Type A : Spring loaded rubber cased seal or metal insert type seal.
 - Type B : Spring loaded metal cased seal.
 - Type C : Spring loaded built up seal.
 - Type D : Non-spring loaded rubber cased seal.
 - Type E : Non-spring loaded metal cased seal.
 - Type AS : Spring loaded rubber cased seal with secondary lip.
 - Type BS : Spring loaded metal cased seal with secondary lip.
 - Type CS : Spring loaded built up seal with secondary lip.
4. **Material** - Unless otherwise agreed upon between the manufacturer and the purchaser, the material for casing, inserts, spring and sealing element shall be such as to withstand the requirements of performance test specified in IS : 5125-1987. "Method of tests for rotary shaft oil seal units (second revision)"
- 4.1 The oil seal shall be supplied suitably protected for environmental resistance.
5. **Dimensions** - This standard specifies the interference limits between the outside diameter of the seal and housing. The interference between the sealing lip and the shaft is part of the basic design criteria and left to the manufacturer.
- 5.1. **Pressfit Allowances of Oilseals** - The pressfit allowance and permissible out of roundness of the outside diameter of the seal for Types A, D and AS shall be as given in Table 2 and for Types B, C, E, BS and CS shall be as given in Table 3.
- 5.3 **Recommended Tolerances for Radial Wall variation of Oilseals** - The recommended tolerances for radial wall variation are given in Table 4, read with Fig. 2.
6. **Workmanship and Finish** - All surfaces of oilseal particularly the sealing lip shall be well finished, free from cuts, blisters and such imperfections. The spring and the stiffener ring shall be free from harmful flaws, deformation and rust. The surface treatment for metallic parts shall be at the discretion of the manufacturer, unless otherwise agreed upon.
7. **Designation** - The oilseals shall be designated by the nomenclature, type, ID, OD, width and number of this standard. For example, an oilseal of Type B of ID 25 mm and OD 40 mm and width 7 mm shall be designated as oilseal B 25 x 40 x 7 IS : 5129.

INDIAN STANDARD IS : 5129 (Part 1) - 1987

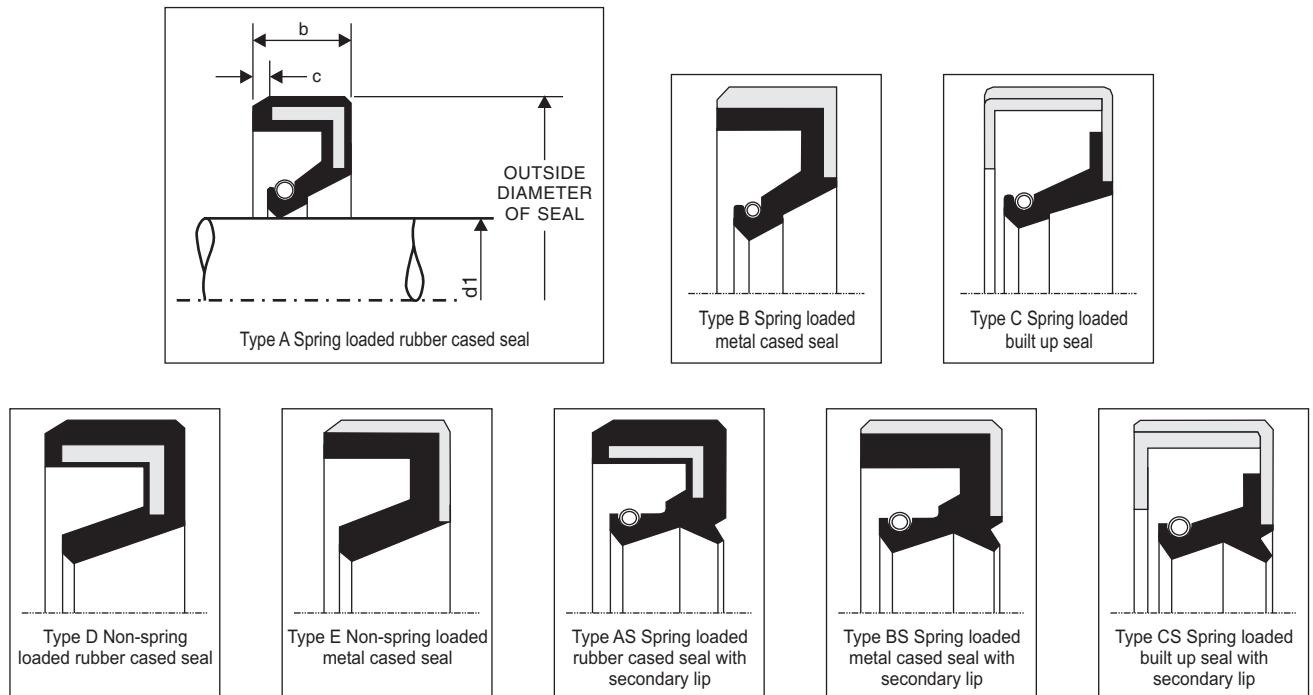

Fig. 1 TYPES OF ROTARY SHAFT RADIAL LIP TYPE OILSEALS

8. **Marking** - Oilseal shall be legibly and permanently marked at a suitable place with shaft diameter d_1 , bore diameter of housing, width b and the manufacturers name or trade-mark.
- 8.1 The following shall be printed or legibly marked on each carton of the seal :
 - a) Dimensions (See 5), and
 - b) Name of the manufacturer, and year and month of manufacture
- 8.2 **Certification Marking** - Details available with the Bureau of Indian Standards.
9. **Sampling** - The sampling inspection plan shall be conforming to IS : 2500 (Part 1) - 1973. Sampling inspection tables :Part 1 inspection by attributes and by count of defects (first revision); the specific sampling plan shall be as agreed between the manufacturer and the purchaser.
- 9.1 **Lot** - The oilseal units of same type and designation belonging to the same consignment shall constitute a lot.
- 9.1.1 Unless otherwise agreed between the buyer and the seller, the oilseals shall be selected from a lot at random for inspecting dimensions. To ensure the randomness of selection, procedure given in IS : 4905-1968 'Methods for random sampling' shall be followed.

INDIAN STANDARD IS : 5129 (Part 1) - 1987

(Clause 5.3 & Fig. 2)

Shaft Diameter	Radial Wall Variation, Max.
Upto 100 mm	0.65
From 100 mm to 150 mm	0.75
150 mm and above	1.00

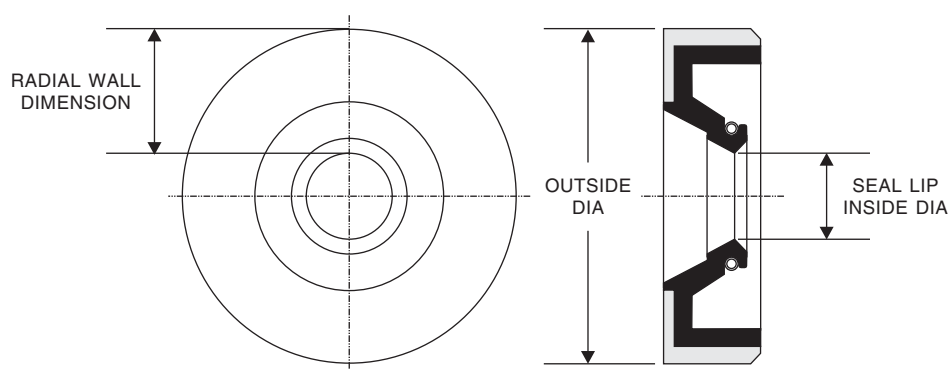

Fig. 2 RADIAL WALL DIMENSION

EXPLANATORY NOTE

This standard was first published in 1969 and was revised during 1979. In view of the experience gained in the country in this field, the Committee responsible for the preparation of this standard felt the necessity of the revision again and accordingly, in this revision, few changes have been made to bring this standard in line with other national standards of advanced countries. Thus, in the preparation of this standard, considerable assistance had been taken from the following :

BS 1399 (Part 1) : 1970	Rotary Shaft lip seals : Part 1 Dimensions of shaft and housing. British Standards Institution
DIN B 3760-1972	Rotary shaft seals, types, dimensions, applications : Deutsches Institute Fur Normung (DIN)
JIS B 2402-1976	Oil seals, Japanese Industries Standards Committee.
SAE J 9461-1984	Guide to the application and use of radial lip type seals, Society of Automotive Engineers, USA

Whilst in this revision, a seprate standard covering terminology and recommendations for storage handling and installation for oil seals has been formulated to form Part 2 of the standard.

The overall and important dimensions of the oilseals are specified in the standard.

The possibility of improving detailed design of the seal while maintaining conformity with this standard is not excluded. Oilseals to suit particular applications and having demensions other than those specified in the standard may be supplied subject to prior agreement between the manufacturer and the purchaser.

This standard has been prepared in two parts. The other part being Rotary Shaft radial lip type oilseal unit : Part 2 Terminology and Recommendations for storage, handling and installation.

INDIAN STANDARD IS : 5129 (Part 2) - 1987

SPECIFICATION FOR
ROTARY SHAFT RADIAL LIP TYPE OILSEAL UNITS
PART 2 - TERMINOLOGY & RECOMMENDATIONS FOR STORAGE, HANDLING & INSTALLATION
(Second Revision)

1. **Scope** - Covers the terminology and recommendations for proper storage, handling and installation for rotary shaft radial lip oilseal units.
2. **Terminology** - For the purpose of this standard, the following definitions shall apply.
 - 2.1. **Oilseal** - A seal designed primarily for the retention of oil.
 - 2.1.1 **Rotary shaft radial lip oilseals** - A type of seal which features a flexible sealing member usually of an elastomeric material referred to as lip and metal support adjacent, capable of preventing leakage due to the inward or outward radial load imposed by the sealing edge on a mating shaft, in order to retain fluids and/or exclude foreign matter.
 - 2.2 **Elements of Rotary Shaft Radial Lip Oilseals**
 - 2.2.1 **Sealing lip** - The flexible portion of a rotary shaft radial lip oilseal, comprising the sealing head and the leg. (See Fig. 1).
 - 2.2.1.1 **Primary lip** - The normally flexible elastomeric component of a lip seal assembly usually spring loaded which rides against the relating surface and effects the seal.
 - 2.2.1.2 **Secondary lip** - A short non-spring loaded lip located at the outside seal face of a radial lip seal to prevent ingress of atmospheric contaminants (See Fig. 1)
 - 2.2.1.3 **Sealing edge** - The extremity of a sealing head which effects the seal (See Fig. 1)
 - 2.2.2 **Metal Case** - See Fig. 1
 - 2.2.2.1 **Outer Case** - See Fig. 1
 - 2.2.2.2 **Inner Case** - See Fig. 1.
 - 2.2.3 **Elastomer Case** - The elastomeric material forming the outside diameter of a metal insert seal (See Fig. 1)
 - 2.2.4 **Garter Spring** - A helically coiled wire with its ends connected to form a ring which is fitted to a lip seal (See Fig. 1). It is used in tension for maintaining a radial sealing force between the sealing element of a radial lip seal and a shaft.
 - 2.3 **Seal Outer Diameter** - The external diameter of a lip seal assembly which normally corresponds to the outer diameter of the outer seal cases.
 - 2.4 **Radial Wall Dimension** - The distance between the seal lip contact line and the seal outside diameter measured in a radial direction on a finished seal in the free state.
 - 2.4.1 **Primary lip** - The normally flexible elastomeric component of a lip seal assembly usually spring loaded which rides against the relating surface and effects the seal.
 - 2.5 **Housing** - A rigid structure which supports and locates the seal assembly with respect to the shaft.
 - 2.6 **Concentricity** - This is also termed as shaft to bore misalignment or offset. It is the radial distance between the axis of the seal bore and axis of shaft rotation.

INDIAN STANDARD IS : 5129 (Part 2) - 1987

- 2.7 Eccentricity of Shaft** - Twice the distance the centre of the shaft is displaced from the centre of rotation and expressed in TIR. That runouts to which the seal lip is subjected due to the outside diameter of the shaft not rotating in a true circle. This is also being referred as 'Shaft runout' or 'Dynamic runout'.

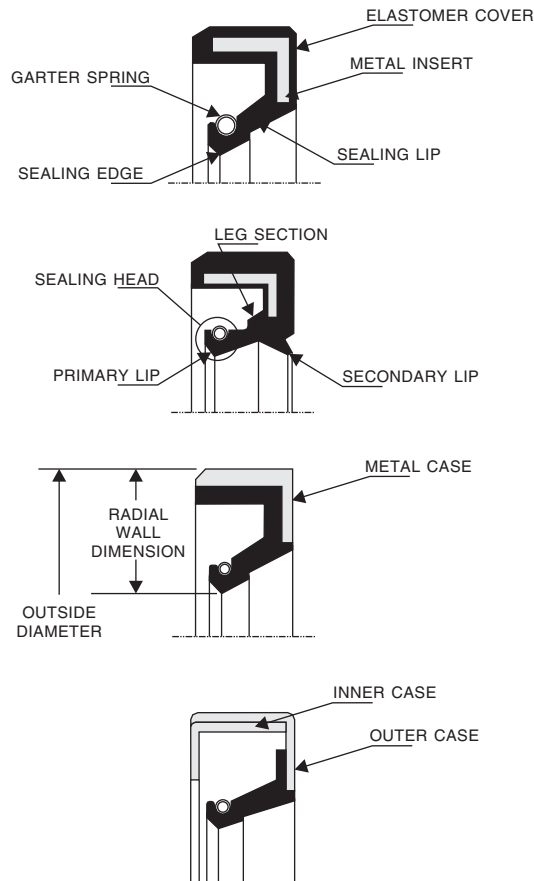

Fig. 1 ELEMENTS OF ROTARY SHAFT RADIAL LIP OILSEALS

- 2.8 Run-in-Period** - The period of initial operation during which the seal lip wear rate is greatest and the contact surface is developed during which period a slight seepage of containing fluid normally occurs.

Note - The rotary shaft radial lip oilseals hereinafter in this standard will be referred as 'oilseals'

3. Packing and Storage

- 3.1** Oil seals shall be packed suitably to prevent ingress of moisture, dust or dirt in storage and transit.
- 3.2** Oilseals shall be stored in a dust and ozone free atmosphere not exposed to direct sunlight. Exposure to extreme cold shall be avoided as low temperature tends to harden the sealing which may lead to some difficulty in assembly.
- 3.2.1** Oilseals shall be stored in their wrappings. On no accounts, they shall be wired or slung together as this will cause damage to the edge of the sealing element and adversely affect the service.

INDIAN STANDARD IS : 5129 (Part 2) - 1987

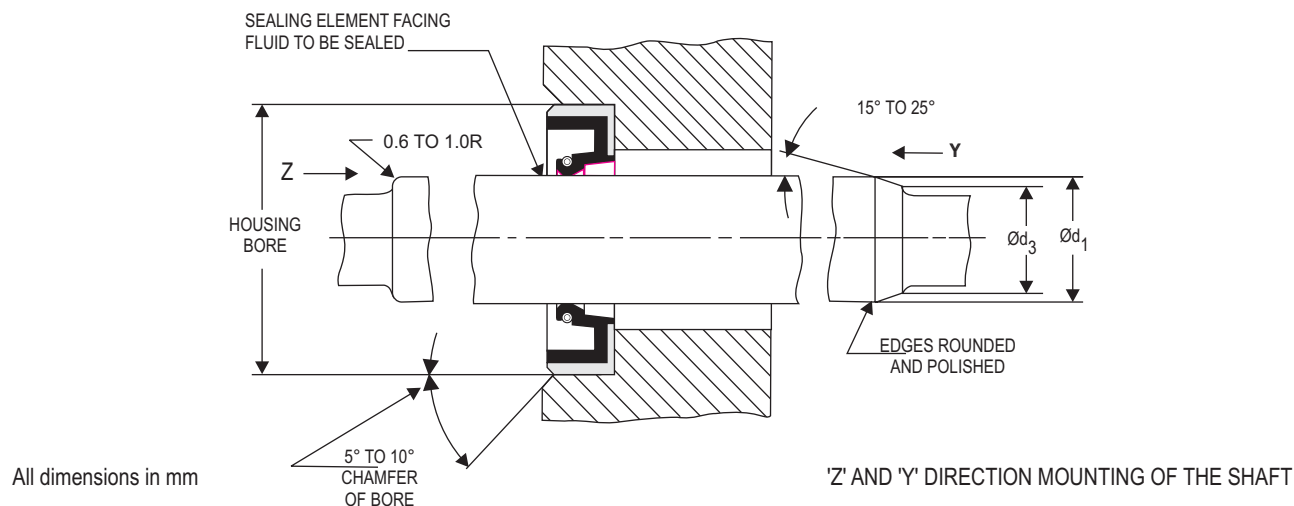

- 3.2.2.** Oilseals shall not be removed from their packaging until they are ready for installation. If seals are to be unpacked and stored in bulk containers, they shall be carefully stacked to prevent damage to the sealing edge. For storing over exceptionally long periods, the seals shall be thoroughly greased and placed in airtight containers.
- 4 Handling** - Oilseals shall be handled with care at all times and shall be kept in the manufacturing package up to the time of fitting.
- 4.1** Care shall be exercised when handling seals having metal outside surface which may damage other seals, especially if the metal edges contact the rubber parts of adjacent seals.
- 4.2** The seal surface shall be free from contaminations of any kind, particularly the prelubed seals are susceptible to this problem when dumped on to the work benches before assembly.
- 4.3** By no means shall any solvents, corrosive liquids and chemicals cleaners be allowed to contact lip seals. These materials may be absorbed by the seal element causing it to swell, disintegrate or otherwise lose its physical properties.
- 5. Installation** - When mounting the oilseals, the manufacturer's instructions shall be followed. Nevertheless, the following recommendations provided guidelines and procedures for good installation practice.
- 5.1 Shaft** - Recommended tolerance on shaft diameter d_1 is h_{11} . To prevent damage to the lip of the seal while mounting, it is recommended to round the shaft by 0.6 mm to 1 mm radius for mounting in Z direction and to chamfer the shaft according to Table 1 for mounting in direction Y (See Fig. in Table 1). The lead in chamfer on the shaft shall be between 15° and 25° .
- 5.1.1** To ensure a proper sealing effect between shaft and seal, it is recommended to grind the shaft without helix, that is without moving the shaft axially, the grinding being done to the extent that surface roughness does not exceed 0.6 microns Ra. It is also recommended to harden the shaft to a minimum of 30 HRC.
- 5.2 Housing** - The housing is the recess into which the lip seal is to be fitted. Recommended tolerance on nominal bore diameter and depth of housing shall be H8 in accordance with IS : 919 (Part 1) - 1963 'Recommendations for limits and fits for engineering : Part 1 General Engineering (First Revision)'. The chamfer of the bore shall be between 5° and 10° .
- 5.3 Assembly Requirements**
- 5.3.1 Eccentricity of shaft** - The runout of the shaft shall be kept to an absolute minimum and the limit shall be a maximum of 0.25 mm TIR (Total Indicated Reading). In case, due to other considerations, this results in higher value, the seal manufacturer shall be consulted.
- 5.3.2 Concentricity** - The axis of the shaft and the housing bore shall be as concentric as possible and in any case the misalignment shall not exceed the values given below : -

Shaft Diameter	Missalignment
Upto 25 mm	0.05 mm
25 mm to 50 mm	0.10 mm
Above 50 mm	0.20 mm

- 5.4** Oilseals before installation shall be examined for any sign of damage, particular attention being paid to the lip and garter spring.
- 5.5** Before fitting, the sealing edge of elastomeric seals shall be uniformly lubricated with the medium to be used in the application.
In all cases, the shaft shall be uniformly lubricated in the medium to be used in the application.

INDIAN STANDARD IS : 5129 (Part 2) - 1987

TABLE 1 DIMENSIONS FOR CHAMFER ON SHAFT FOR MOUNTING SEALS (Clause 5.1)

d1	d3	d1	d3	d1	d3	d1	d3	d1	d3	d1	d3
6	4.8	24	21.5	52	48.3	85	80.4	160	153	340	329
7	5.7	25	22.5	55	51.3	89	85.3	170	163	360	349
8	6.6	26	23.4	56	52.3	95	90.1	180	173	380	369
9	7.5	28	25.3	58	54.2	100	95	190	183	400	389
10	8.4	30	27.3	60	56.1	105	99.9	200	193	420	409
11	9.3	32	29.2	62	58.1	110	104.7	210	203	440	429
12	10.2	35	32	63	59.1	115	109.6	220	213	460	449
14	12.1	36	33	65	61	120	114.5	230	223	480	469
15	13.1	38	34.9	68	63.9	125	119.4	240	233	500	489
16	14	40	36.8	70.0	65.8	130	124.3	250	243		
17	14.9	42	38.7	72	67.7	135	129.2	260	249		
18	15.8	45	41.6	75	70.7	140	133	280	269		
20	17.7	48	44.5	78	73.6	145	138	300	289		
22	19.6	50	46.4	80	75.5	150	143	320	309		

- 5.6** The sealing lip shall always be turned towards the side to be sealed and shall be free, that is, it shall not be clamped. The contact of the lip shall be smooth.
- 5.7** In some applications the seal may best be assembled on the shaft and then pressed into its housing; in others, it may be fitted into the housing first and the shaft then passed through the seal. In some applications, it may be necessary to rotate the shaft slowly to achieve assembly, care being taken to see that the seal, at no time, supports the weight of the shaft or housing. Care shall also be taken to ensure that there is no excessive deformation of the lip during or after assembly.
- 5.8** The end of the shaft shall be provided with a lead-in-chamfer to the minimum sizes recommended in Part 1 of this standard. If, for reasons of design, it is not possible for the chamfer to be provided on the shaft itself, fitting sleeve shall be used and in many cases will be essential for the fitting sleeve shall be used and in many cases will be essential for the protection of the seal against damage from splines, keyways etc.
- The shaft shall also meet the other requirements as in Part 1 of this standard.
- 5.9** The mouth of the housing shall be provided with lead-in chanfer as recommended in Part 1 of this standard.

INDIAN STANDARD IS : 5129 (Part 2) - 1987

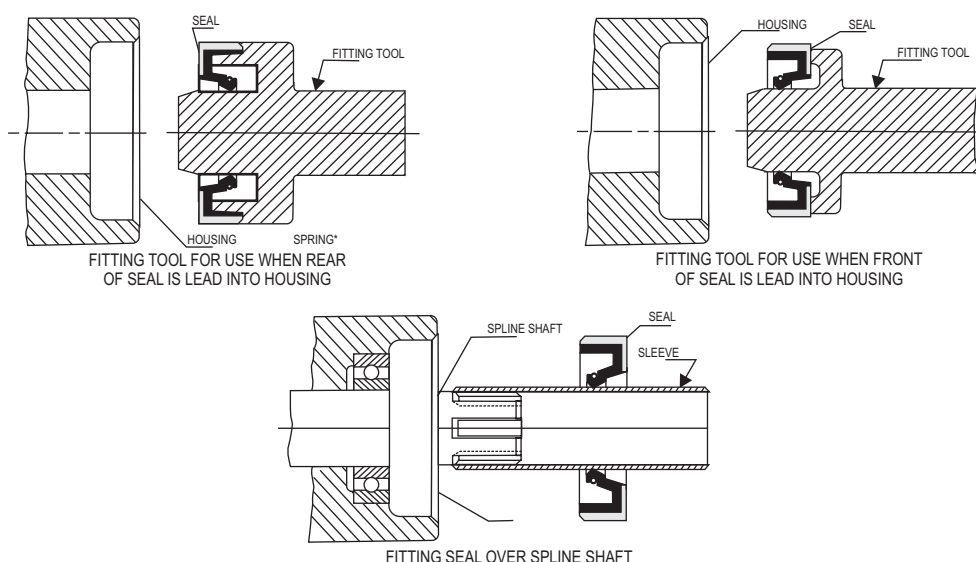

The tolerance on nominal bore diameter of housing shall be as recommended in Part 1 of this standard. If the bore that receives the seal is no. one portion made of a special material, such as special light metal alloy, it might happen that the press fit allowance and tolerance specified in the standard cannot be maintained. In such cases an agreement with the manufacturer should be reached.

- 5.10** The seals shall be mounted concentrically and perpendicularly to the shaft and a suitable driving tool may be used.

The installed squareness is a factor in the functioning of a radial lip seal. Squareness is obtained by pressing the seal uniformly into the housing bore and aligning the seal with a machined surface whether the seal is installed even with the bore front, or bottomed against bore shoulder.

- 5.11** A general method of mounting oil seals is illustrated in Fig. 2.

- 5.12** In case of replacement, always a new seal shall be used.

*Remove spring if necessary and refit when seal is assembled.

Fig. 2 METHOD OF MOUNTING ROTARY SHAFT SEALS

EXPLANATORY NOTE

This standard was first published in 1969 and subsequently revised in 1979. The present revision of this standard has been taken up to bring it in line with current international practice.

In the preparation of this standard, considerable assistance has been derived from the following.

BS 1399 (Part 3) : 1970	Specifications for Rotary Shaft lip seals : Part 3 Terminology and recommendations for handling.
SAE J111C : 1984	Terminology of radial lip seals. Society of Automotive Engineers, USA.
ISO/DP 6194 (Part 3) 1983	Rotary Shaft lip type seals : Part 3 Storage, handling and installation

The purpose of this standard is to provide a glossary of terms and nomenclature which are normally encountered in the designs, manufactures, installation, testing and inspection of rotary shaft radial lip oil seals.

This standard also covers recommendations for storage and handling of lip seals from the time they are received by the user, including the installation process. The standard is, therefore, intended to serve as a guide for lip seal user, calling attention to possible hazards, both prior to and during installation which would adversely affect service life of seal units and pointing out ways to avoid them.

This standard had been prepared in two parts. The first part been on Rotary Shaft Radial lip type oil seal units: Part 1 Dimensions.

SPAREAGE SEALING MATERIALS

Elastomeric Materials

Material	Abbr.	Operating Temp.	Properties	SpareAge Code	Hardness
Nitrile Rubber	NBR	- 30° C to +100° C	Nitrile rubber is the sealing material most frequently used in Hydraulic & Pneumatic systems because of its excellent resistance to mineral oil based fluids, greases, water, hydrocarbon fuels. It has good physical characteristics such as abrasion resistance and good compression set. NBR is not suitable to Aromatic hydrocarbons, chlorinated hydrocarbons, automotive brakes fluids, and some fire resistant hydraulic fluids.	NT 4/b NT 5/b NT 6/b	70° / 75° 80° / 85° 90° / 95°
Carboxylated Nitrile Rubber	XNBR	- 30° C to +100° C	XNBR properties are similar to those of NBR polymers but they are characterised by improved abrasion behaviour in applications subjected to dynamic stress.	NT 23/b NT 24/b NT 25/b	70° / 75° 80° / 85° 90° / 95°
Hydrogenated Nitrile Rubber	HNBR	- 30° C to +140° C	HNBR has good heat resistance, oil resistance & resistance to number of aggressive chemicals. The material exhibits high mechanical strength and improved abrasion resistance. It also has superior resistance to weathering, ozone and hot air and very good resistance to technical oils, even in the presence of hydrogen sulphide and amines.	NT 42/a NT 42/b NT 34	70° / 75° 80° / 85° 90° / 95°
Fluoro Rubber (Viton®)	FPM	- 40° C to + 220° C	The main characteristics of FPM are they are resistant to high temperatures, & their chemical stability. They also display minimal weight loss in high vacuum & also its permeability to gases is low. VITON is compatible to fire resistant Hydraulic fluids, hot oils, greases, hydrocarbon, chlorinated hydrocarbons most organic acids, even at high concentrations and a number of organic compounds. It has excellent resistance to hot water and to steam. FPM , however is not resistant to methanol, ketones, esters and ethers.	VT 2/b VT 3/b VT 4/b	70° / 75° 80° / 85° 90° / 95°
Silicon Rubber	VMQ	- 70° C to + 200° C	SILICON Rubber is characterised by high thermal resistance, good cold flexibility, good dielectric properties, very good resistance to oxygen and ozone attack. The main advantage is that it retains flexibility at very low temperatures and can withstand continuous heating without hardening, making it suitable for low and high temperature applications. SILICON compounds have poor strength and tear resistance. Their resistance to oils and fuels is poor, concentrated acids and alkalis, water and steam at temperatures over 100°C will destroy the material.	SL 4/b SL 5/b SL 6/b	70° / 75° 80° / 85° 90° / 95°

SPAREAGE SEALING MATERIALS

Elastomeric Materials

Material	Abbr.	Operating Temp.	Properties	SpareAge Code	Hardness
Chlorobutadine Rubber (Neoprene)	CR	- 20° C to +100° C	CR based compounds are characterised by excellent resistance to chemicals, to ageing, to weathering effects, and to ozone attack. Its resistance to swelling in mineral oils, greases and water is moderate. CR compound are not resistant to aromatics compounds such as benzene, toluene, chlorinated hydrocarbons, esters, ethers and ketons.	NP 4/b NP 5/b NP 6/b	70° / 75° 80° / 85° 90° / 95°
Ethylene Propylene Diene Rubber	EPDM	- 40° C to +120° C	EPDM elastomer have very good resistance to ozone, ageing and weathering. Hence they are best suited for extruded profile sections and sealing strips. They have good resistance to swelling in hot water, steam, washing liquids, oxidising media, acids, bases, polar organic media, ketones, fire retardant hydraulic fluids & hydraulic brakes fluids. EPDM is not suitable for use in mineral based oils or hydrocarbons. But in non-mineral automotive brake fluids and phosphate esters, the swelling is minimal.	EP 4/b EP 5/b EP 6/b	70° / 75° 80° / 85° 90° / 95°
Polyurethane	PU	- 30° C to +80° C	Polyurethane material has extremely good mechanical properties such as high tensile strength, abrasion resistance, tear strength, extrusion strength and above all, good flexibility. PU has good resistance to swelling in mineral oils and greases, water, oil mixtures, and aliphatic hydrocarbons. PU is not resistant to polar solvents, chlorinated hydrocarbons, aromatics, brake fluids, acids and alkalis.	PU - 1	90°
Butyl Rubber	IIR	- 40° C to +120° C	IIR elastomers permeability to gases and water vapour is low and have good electrical insulation properties. They have good resistance to brake fluids based on glycol, organic and inorganic acids and bases, hot water and steam up to 120°C. They have very good resistance to weathering and ageing. Butyl Rubber is not suitable for use with mineral based oils and aromatic solvents.	BU 4/b BU 5/b BU 6/b	70° / 75° 80° / 85° 90° / 95°
Styrene Butadiene Rubber	SBR	- 10° C to +125° C	SBR has good resistance to inorganic and organic acids, as well as alcohols and water, and brake fluids based on glycol. SBR is not resistance to mineral oils, lubricating greases, petroleum, and aliphatic, aromatic and chlorinated hydrocarbons.	PC 4/b PC 5/b PC 6/b	70° / 75° 80° / 85° 90° / 95°

SPAREAGE SEALING MATERIALS

Elastomeric Materials

Material	Abbr.	Operating Temp.	Properties	SpareAge Code	Hardness
Natural Rubber	NR	- 30° C to +80° C	NATURAL Rubber exhibits high mechanical strength and elasticity with very good low temperature characteristics. Because of its high mechanical strength, NR is frequently combined with fabric reinforcement for seals in applications where water is the hydraulic fluid. It has good resistant to acid and bases at low concentrations as well as alcohols. NR is not resistant to mineral oils and greases, fire resistant hydraulic fluids, aromatic, aliphatic, and chlorinated hydrocarbons.	NR 5/b NR 6/b NR 7/b	70° / 75° 80° / 85° 90° / 95°
Polyacrylic Rubber	ACM	- 10° C to +125° C	The properties of POLYACRYLIC Rubber are midway between nitrile and fluorocarbon rubber. They have excellent resistance to mineral oils, hypoid oils and greases upto 125°C. They are resistant to ageing & flex cracking. ACM is characterised by poor mechanical strength and resistance its to water is poor.	PC 4/b PC 5/b PC 6/b	70° / 75° 80° / 85° 90° / 95°
Fabric Reinforced Rubber	R/C	- 40° C to +100° C Upto 200° C	Seals which are subjected to high pressure are impregnated by cotton fabric for improved extrusion resistance. The fabric structure forms micro lubricating pockets, resulting in lower friction values; thus helping to reduce wear. The fabrics are coated with unvulcanised rubber solutions of NBR & FPM depending on the application of the seal.	NT36(R/C) VT3/b(R/C)	80° / 85° 80° / 85°

SPAREAGE SEALING MATERIALS

Polytetrafluorethylene (PTFE)

Material	Abbr.	Operating Temp.	Properties	SpareAge Code	Hardness
PTFE	PTFE	- 200° C to +260° C	PTFE is commonly known by Du pont trade name TEFLON. PTFE is characterised by its outstanding resistance to chemicals and low coefficient of friction combined with a very wide working temperature range. Only liquid alkaline metals and some fluoride compounds can attack PTFE at high pressures and temperatures. Depending on the temperature and the load, PTFE has a tendency to creep or cold flow. For this reason, Spareage does not use pure PTFE for sealing components in hydraulic systems, with the exception of back ups for O'rings. For the majority of sealing tasks, only filled PTFE materials are used, reinforced with materials such as Bronze, Glass, Graphite & Carbons.	PFT	50 D to 65 D
Bronze Filled Teflon	BFT (40% & 60% Bronze filled PTFE)	- 200° C to +260° C	It is high compressive strength, excellent wear resistance, very low cold flow, and good thermal conductivity.	MBRT	71 D to 73 D
Glass Filled Teflon	GFT (15% & 25% Glass filled PTFE)	- 200° C to +260° C	High compressive strength, better wear resistance & excellent chemical resistance.	GLT	66 D to 68 D
Carbon Filled Teflon	CFT (15% & 25% Carbon filled PTFE)	- 200° C to +260° C	High compressive strength, better wear resistance and good thermal conductivity.	CAT	71 D to 73 D
Graphite Filled Teflon	GRT (15% & 25% Graphite filled PTFE)	- 200° C to +260° C	High compressive strength, good chemical resistance and improved frictional properties.	GRT	62 D to 65 D
