

During installation of rotating equipment shaft alignment is important. Shims play a crucial role in positioning accuracy of the equipment. Lack of shim of proper size and thickness during installation may lead to less than optimal support for the equipment feet during operation. This can lead to vibration and ultimately, to unplanned breakdowns and enormous downtime expenses.

FEATURES

- Six different sizes in nine different thickness
- Perfectly flat for stable, consistent machine support.
- Fully deburred to avoid cuts.
- Permanent marking provides easy identification at glance.
- Corrsion resistant stainless steel material withstands acids and alkali.
- Save a lot of time, labour & money which are wasted by hand cut shims.
- Accurate alignment improves equipment performance & hence it's reliability.

Save Alignment time,
Avoid failures and downtime,
Save money

ADVANTAGE OF PRECUT SHIMS OVER HAND CUT SHIMS:

HAND CUT SHIMS	PRECUT SHIMS
Sheets are to be stored-inventory	Sheets are not required
Process : Locate material, mark it, cut, deburr & flatten it	Ready to use
Improper Processing -Inaccurate alignment	Accurate alignment
Danger of injury when cutting & inserting sharp edged shims	Safe as these are deburred
No hole in Shim tab	Hole in Shim tab makes insertion & removal easier
