Case Study : Summit Upgrade for one of the leading banks in UK

Challenges

- Major changes in technical architecture as it's a leap from Summit 55 to 61
- Infrastructure upgrade is the major component which posed many challenges in the program delivery
- Multi vendor program poses the challenges of co-ordination across the teams
- Continuing BAU changes and Core vendor code base poses challenges in integration

Solution

- Proof of Concept was performed to showcase the feasibility
- Virtusa resources championed the application delivery
- Dev Ops and Test Automation are implemented to enable easy maintenance of the product
- Alignment of project planning with current book of work as well as vendor service packs
- Evaluated and on-boarded a new test automation tool specific to Summit

Value delivered

- No major issues pending from application development perspective
- Delays were mainly attributed to Infrastructure teams
- Benefits of Test automation was well reaped by reduced test cycles
- Team's responsiveness was commended by client from time to time
